Create view Accesses as
Select ObjectId from AccessTable where Allow=1

```

With SearchQuery AS (
Select ObjectID from Table1 where ...
) , SearchQueryExt (
Select * from SearchQuery
union Select ObjectID from Table2 where ....
union Select ObjectID from Table3 where ....
), FilterQuery (
Select *
    fom SearchQueryExt s
    join Accesses a on a.ObjectID = s.ObjectID
)
Select *
    from TableN s
    join FilterQuery f on s.ObjectID = f.ObjectID

```

Create function Accesses (ObjctIds ????)

```

Select ObjectID
    from AccessTable
where ObjctId in ObjctIds
    and Allow=1

```

```

.
.
.
), FilterQuery (
Select *
    fom SearchQueryExt s
    join dbo.fAccesses(select ObjectID from SearchQuery) on a.ObjectID = s.ObjectID
)
.
.
.

```
