```
# Program (complete command line with arguments) that is executed when some
# replication segment gets full and needs archiving.
#
# This program MUST return zero ONLY if archiving has been performed successfully.
# In particular, it MUST return non-zero if the target archive already exists.
#
# Special predefined macros are available:
# $(filename) - file name (without path) of the journal segment being archived
# $(pathname) - full path name of the journal segment being archived
#   same as journal_directory + $(filename)
# $(archivepathname) - suggested full path name for the archived segment
#   same as journal_archive_directory + $(filename)
#
# Simplest configuration is to use standard OS commands for archiving, e.g.:
#
# Linux: "test ! -f $(archivepathname) && cp $(pathname) $(archivepathname)"
# or
# Windows: "copy $(pathname) $(archivepathname)"
#
# journal_archive_command =
```
