-- birthday is input parameter

```
birthyear  = extract( YEAR from birthday );
current_year = extract( YEAR from current_date );
age        = current_year - birthyear;
age        = iif( extract( YEARDAY from current_date ) >= extract( YEARDAY from birthday ), age,
age - 1 );
```

```
create function calculate_age(  
    birthday date  
    , otherday date  
)returns  
    integer  
as  
    declare variable birthyear integer;  
    declare variable otheryear integer;  
    declare variable age    integer;  
begin  
  
    birthyear = extract( year from birthday );  
    otheryear = extract( year from otherday );  
    age      = otheryear - birthyear;  
    age      = iif( extract( yearday from otherday ) >= extract( yearday from birthday ), age, age - 1  
);  
  
    return age;  
end
```
