```
# =====  
# Settings for Architecture Configuration  
# =====  
  
#  
# Controls the method Firebird engine uses to work with databases and  
# related Firebird server startup parameters.  
#  
# The values are:  
# Super / ThreadedDedicated - databases are opened exclusive by single server process,  
#   attachments share single DB pages cache inside process  
# SuperClassic / ThreadedShared - databases are opened by single server process,  
#   but it does not prevent opening them in other processes (embedded access),  
#   each attachment has its own DB pages cache  
# Classic / MultiProcess - for each attachment to server a separate process is started,  
#   each database may be opened by multiple processes (including local ones for  
#   embedded access), each attachment (process) has its own DB pages cache  
#  
# Type: string  
#  
#ServerMode = Super
```
