usage: gfix [options] <database>

plausible options are:

- fe(tch_password) fetch password from file
- me(nd) prepare corrupt database for backup
- nol(inger) close database ignoring linger setting for it
- n(o_update) read-only validation (-v)
- pa(ssword) default password
- role set SQL role name
- tru(sted) use trusted authentication
- user default user name
- v(alidate) validate database structure
- z print software version number

Options can be abbreviated to the unparenthesized characters[/quote]
